DVM and Vet Nurse Students -- Rabies and Tetanus/Diphtheria Vaccines and TB Testing

The Office of the University Physician has the responsibility for monitoring the veterinary students for Tuberculosis (TB) and required vaccines during their clinical experience at Michigan State University. Monitoring guidelines are based on recommendations from the Centers for Disease Control and Prevention. The University requires this monitoring. Required information will be kept in an online database. You will be able to view and print this information. The information will be available to you for at least two years after you graduate. The address is [www.hcpimmunize.msu.edu](http://www.hcpimmunize.msu.edu).

**TB Monitoring**
This consists of two TB tests and readings - one in your first semester at MSU and one just before graduation. This is to assess if you have been exposed to TB while attending MSU. Your first TB test must be administered on or after August 1 of the year you begin your program. Individuals that have had a positive TB skin test in the past will be monitored by symptom questionnaire or a blood test. TB Symptom monitor forms can be found at [http://occhealth.msu.edu/files/attachment/124/original/TB_Initial.pdf](http://occhealth.msu.edu/files/attachment/124/original/TB_Initial.pdf); TB blood tests can be arranged through our office.

**Tetanus/Diphtheria Vaccine**
Documentation of your most recent (within 10 years) Tetanus/Diphtheria vaccine must be provided to the Office of the University Physician prior to interacting with animals at MSU. Current Centers for Disease Control and Prevention guidelines recommend that every adult get Tetanus/Diphtheria/Pertussis (Tdap) vaccine when they are due for their next dose. Adult forms of this vaccine are called Adacel or Boostrix.

**Rabies Vaccine**
Documentation of two or three doses of appropriately spaced Rabies vaccine must be provided to the Office of the University Physician prior to interacting with animals at MSU. The two dose vaccine series consists of vaccines administered at day 0 and day 7. The three dose vaccine series consists of vaccines administered at day 0, day 7, and day 21 or 28. You may want to check to see if your health insurance will cover all or part of the cost of the vaccine series. This vaccine is generally not easily available in the community; however, you may want to check with your family physician or local health department. MSU students can also make an appointment with the [MSU Student Health Center](http://www.msu.edu/dept/health) to receive the Rabies vaccine series.

**Rabies Titer**
A one-time Rabies titer is required 2 years after the completion of the two dose Rabies vaccine series. If the Rabies titer result is low, a booster dose of Rabies vaccine is required. If the Rabies titer result is present, no additional action is required. Students who have received the three dose vaccine series are not required to complete a titer. Rabies titers may be arranged through the Office of the University Physician, in Room 123 at Olin Health Center, on a walk-in basis. The testing is done through the State of Michigan. It can take up to six weeks to get the results; however, the usual time is about 1 to 3 weeks. There is currently no cost to you for rabies titers.
